EnAccess Maps · Challenge 2

# AccessProof

## AI review integrity for accessibility data people can trust.

Team - Atlas

- Wanicha Srisukha
- Ashish Johnson
- Gabriel Lora

Problem & audience

# Rewards grow reviews, and dodgy ones

**Who uses it: the EnAccess Maps team**

"As the EnAccess Maps team, we want every incentivised review checked for quality and authenticity, so we only reward genuine contributions  without checking every review by hand."

**Fabricated**
Reviews of places never visited

**Rushed**
Ten one-liners to hit the voucher

**Low-effort**
"Looks accessible" — nothing to plan with

Validation

# Big platforms already need AI to keep reviews honest

**292M+**

reviews blocked or removed by Google Maps in 2025, using AI

Google Maps Trust & Safety, 2026

**~45%**

of Australian online marketplace shoppers often see fake or suspected fake reviews; **59%** worry AI can create fake content

ACCC Digital Platform Services Inquiry, 2025

**70.5 million trips**

Domestic and international travelers with accessible needs. Accurate information would help most

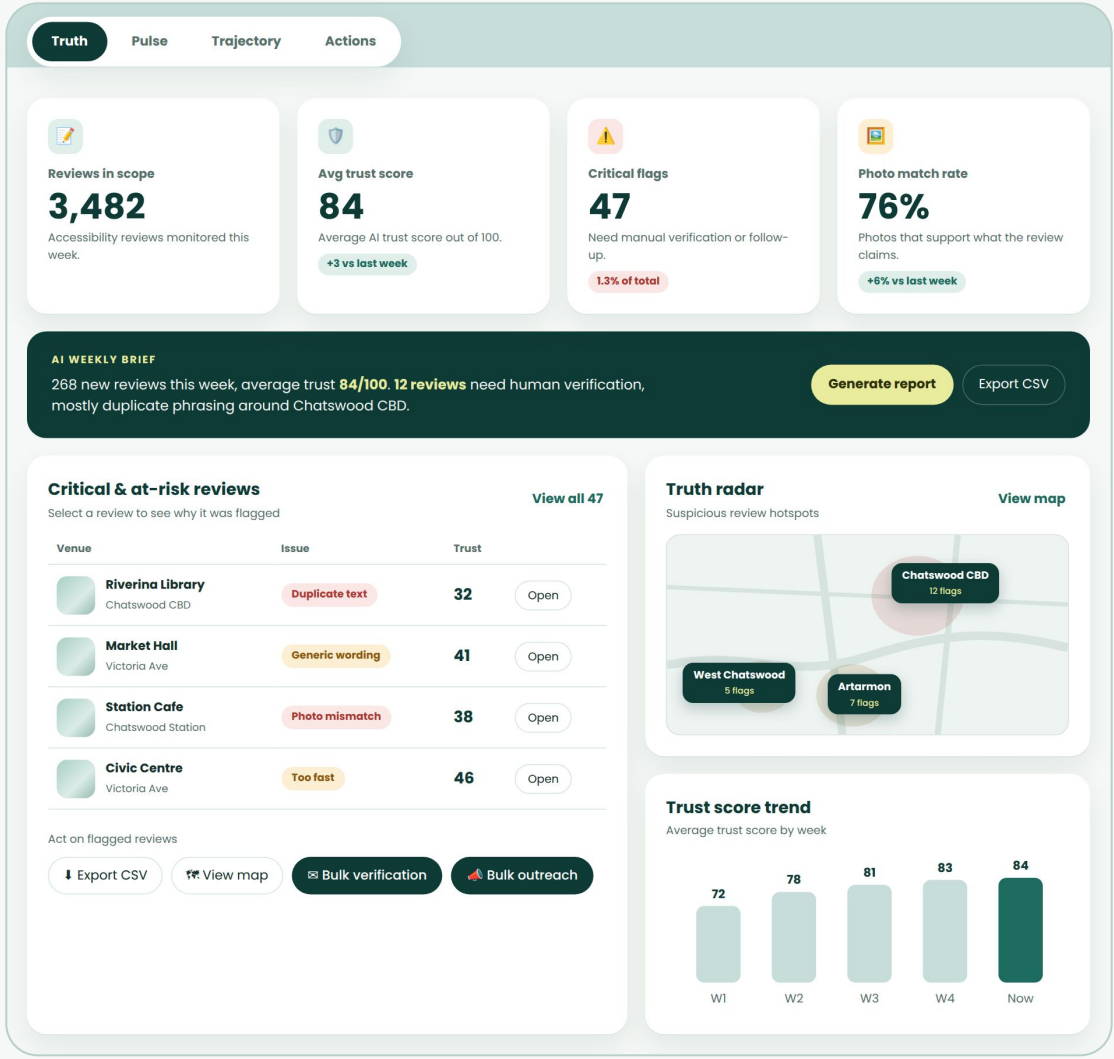

Accessible tourism in Australia, 2024

**No one does this for accessibility data yet.**

Solution

# One console for review integrity

- A trust score out of 100 for every review
- Flags duplicate text, generic wording, photo mismatch and rushed reviews
- Hotspot map shows where problems cluster
- Weekly AI brief, report and CSV export

Solution

# How the score works

### Corroboration

35 pts. Do other visitors report the same thing?

### Provenance

30 pts. Location, timing and pace of submissions

### Photo evidence

20 pts. Does the photo show what they ticked?

### Specificity

15 pts. Detail you could plan a trip around

## Publish at 70. Request more at 40. Below that, a person decides.

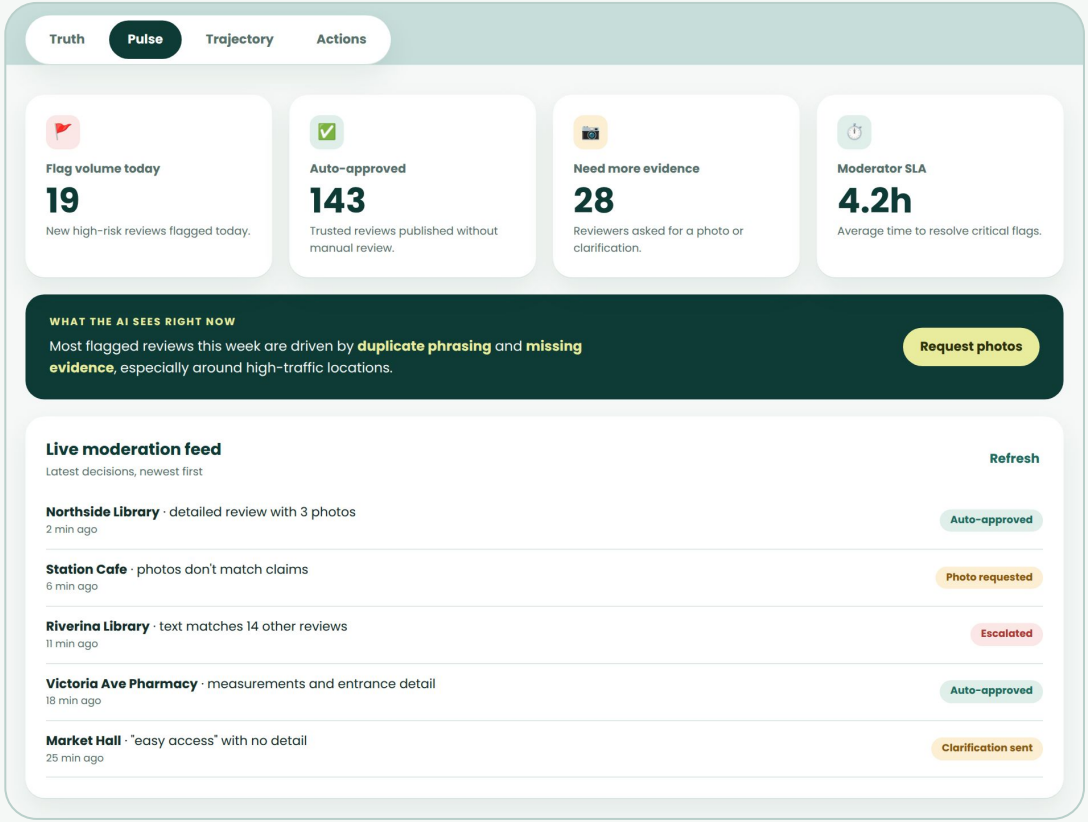

### Worked example

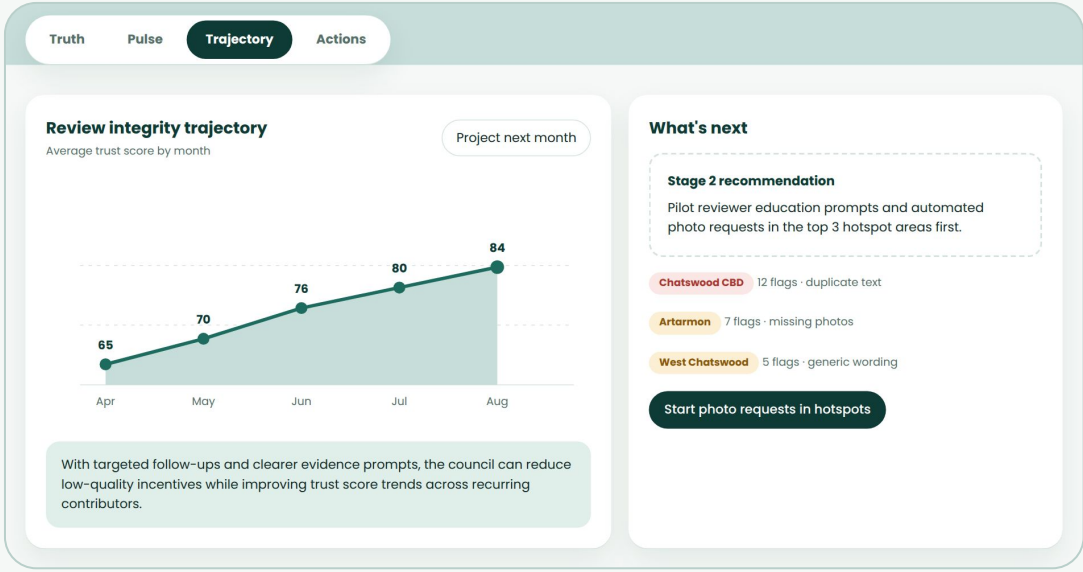

"Ramp at the side entrance, accessible toilet available. Gate to the ramp was locked on Sunday."

Corroboration 14 + provenance 30 + photo 0 + specificity 12 = 56. Ask for a photo of the entrance.

Solution

# Live moderation, measurable progress

Trusted reviews publish automatically. Weak ones get a request for evidence, not an instant reward.

Demo data

Differentiation

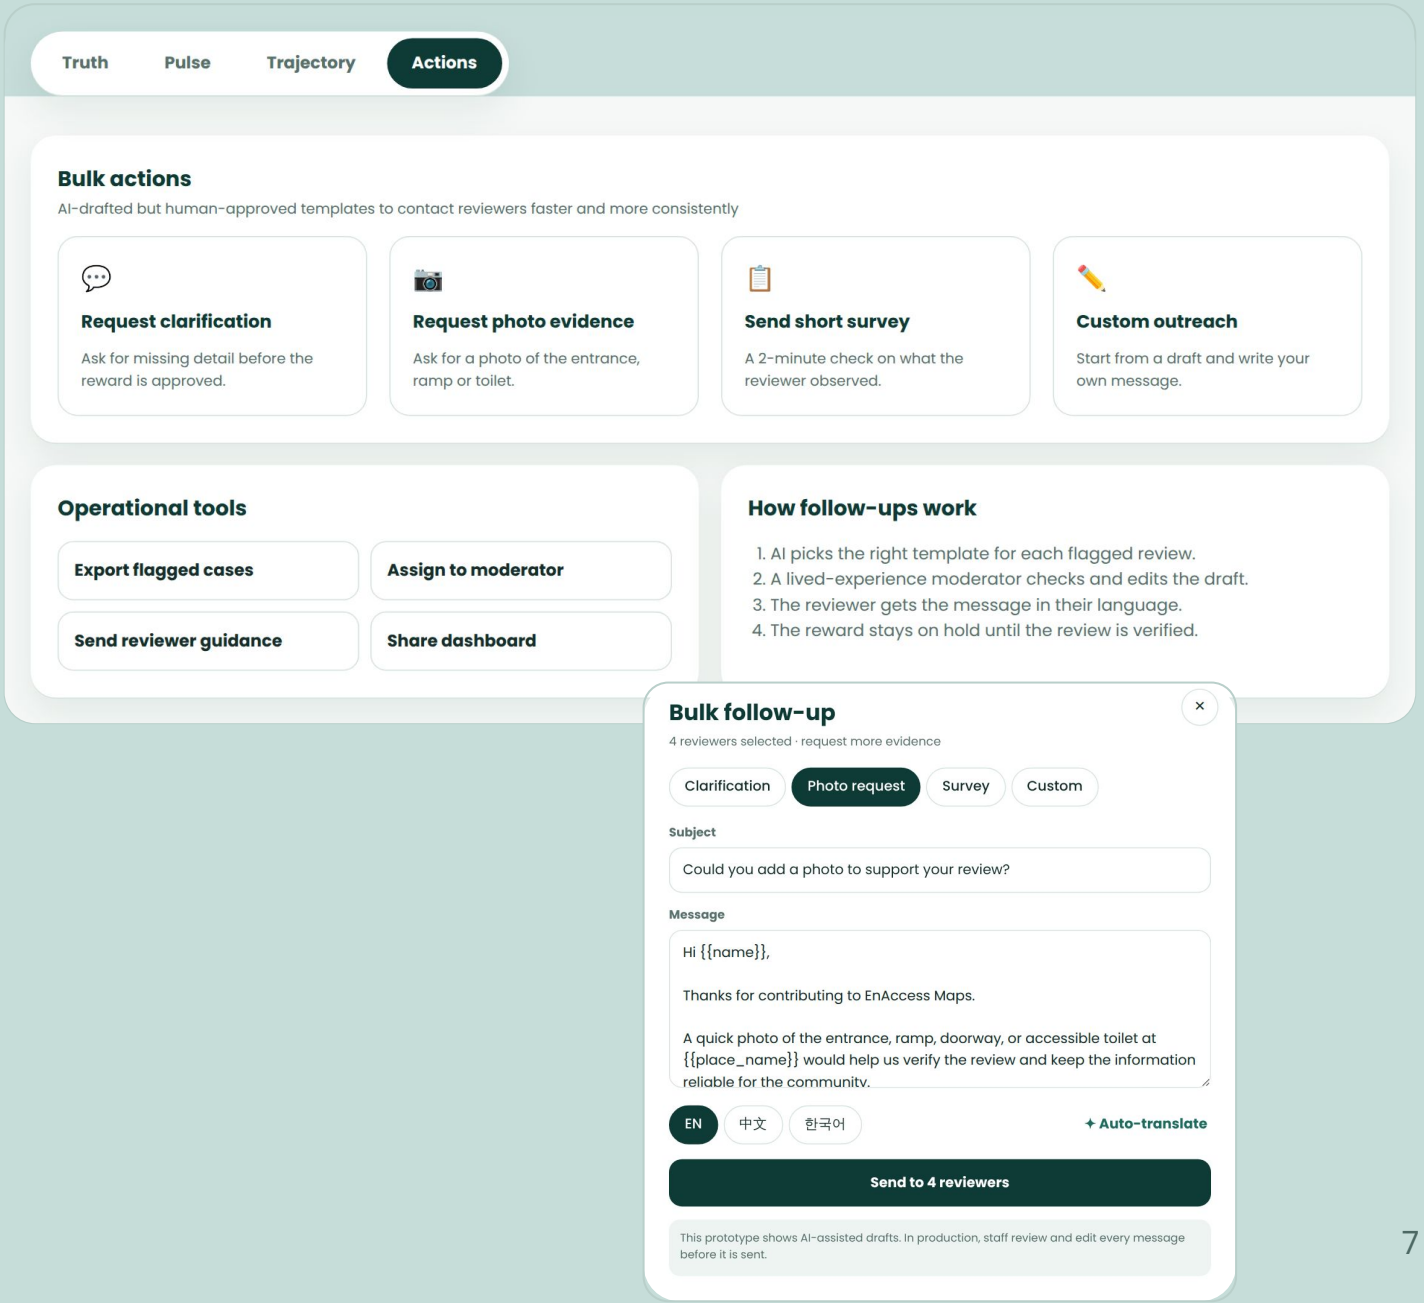

# AI drafts. People decide.

Other filters just delete. AccessProof follows up, so genuine reviewers can fix a review before the reward decision.

**Request clarification**

**Request photo evidence**

**Send short survey** **Custom outreach**

Business model

# Sustainable, not profit-driven

### Launch funding

Innovation and health grants to build and pilot

### Premium council package

Verified access guides plus the integrity dashboard and reports

### Protects sponsor budgets

Vouchers only fund verified reviews, so partner sponsorship is easier to secure

### Paid lived-experience moderators

People with disability review flagged cases and approve AI-drafted follow-ups

Impact

# What changes if it works

**People with disability**

Plan visits with confidence — no more "step-free" surprises

**EnAccess Maps**

Scale incentives without scaling spam or manual checks

**Councils & sponsors**

Every dollar buys verified, publishable access data

**Community**

New paid work for people with lived experience

Measured in the dashboard: average trust score, approval rate, photo match rate, and voucher spend on low-quality reviews

Next steps

# The first six months

**Month 1**

## Learn from real data

Co-design quality criteria with EnAccess and lived-experience reviewers; label past reviews

**Months 2–3**

## Build and test

Turn the prototype into a working scoring model; test it on labelled reviews; train the first paid moderators

**Months 4–6**

## Pilot

Run it live at one Mapping Day or council area; measure trust score, approvals and voucher savings

Our ask

# What we need to build it

**Data access**
Anonymised past reviews to train and test

**An intro**
One council or Mapping Day partner to pilot with

**Mentoring**
Lived-experience reviewers and an AI/ML mentor

**Funding**
AI, hosting and paid moderators for the pilot

**Help us make every rewarded review one people can trust.**

Thank you

# AccessProof

Every rewarded review, one people can trust.
